The Talking Sound podcast was created to educate aspiring audio/video engineers and recording musicians on the application of old and new technologies in the audio field by listening to the stories of engineers working in the industry. With years of experience in both live and studio A/V engineering, host Christopher Jordan provides insight into the technical breakdown of how things work together, the techniques required to achieve the best results, and the skills needed to deal with the pitfalls, conundrums and issues that arise from running live shows, broadcasts, as well as recording and editing audio and video.

Talking Sound brings you a steady stream of guests including recording artists, live and studio engineers, game designers, film directors, special effects artists and composers, all sharing their stories of how they came to be in their field.

The Talking Sound podcast is a proud member of the HC Universal Network family of podcasts.

About the Host:

Christopher Jordan has spent more than 20 years of his life as a professional freelance audio/video engineer. Engineering everything from independent bands, to bars, large venues, road shows and broadcast radio and television. Chris started the Talking Sound Podcast as his way to share his years of knowledge in the industry with those looking to find their path as A/V or production engineers. As owner of HC Productions, Chris now spends his time providing A/V services and engineers for large scale corporate events as well as producing live streaming conferences and more. In his downtime he loves running and operating the HC Universal Network of podcasts, speaking at conferences and training seminars as well as providing one on one consultations to up-and-coming podcasters and professional podcasters alike with his business Podcast Cadet.
